

- 1) Check preconditions:
 - check the internet connection (refresh)
 - check browser (refresh)
- 2) Check input values in input form:
 - check different numbers calculation
 - check that input numbers display correctness
 - check the algorithm of mistake (if the display result is only +1 to expected)
 - check reaction to another symbol input
- 3) Check the script using Chrome DevTools
- 4) Create a short bug report and apply it to the developer
- 5) Together with the developer check variable values and algorithm of actions using the WhiteBox technique.
